Homework 1

Xinyu Wu

November 4, 2026

Read the code in the `hw_01.tex` file to see how the document is formatted. "Math mode" in LaTeXcan be delimited by dollar signs or by beginning and ending an `equation` or `aligned` environment. I suggest making a copy of the original LaTeXfile and editing the copy in case something breaks and you're not sure how to get back to the functioning file. As with any code, make incremental changes and compile them so that if you make a mistake it is easy to undo.

In order to generate a `.pdf` file, you will use the command line command

```
pdflatex file_name.tex
```

You will need both `latex` and the `pdflatex` tools installed. Both should be included if you follow the instructions for your platform here:

```
https://www.latex-project.org/get/
```

Be sure to put your own name in the author field of this document!

Problem 1

For this week, the only thing you need to do is to make sure your LaTeXinstallation and `pdflatex` tool are working correctly. Edit the `.tex` file and compile it to generate a `.pdf` file. The resulting file should have your name in the correct place above and should have the words "Hello LaTeX" written below (under "Solution 1:")

Solution 1:

Hello LaTeX

Submission

Be sure to copy or move your solution files (both `.tex` and `.pdf`) into the `solutions` directory for this assignment.
